Memorandum

From: Steve Willis
To: Wayne Miller
Date: November 21, 2016
Subject: Site visit to observe well drilling activities at Former Williams AFB Site ST012.

Wayne:

This memo summarizes my visit to Site ST012 on Sunday November 20.

Drilling was in progress with two rigs at the site of the nested well CZ24/UWBZ38 and boring SB17 east of Sossaman Rd. The rig drilling the nested well boring was broken down at a depth of 146-ft. and repairs were being made. The crew drilling SB17 was at lunch after drilling to the same depth of 146-ft. I discussed results and progress with Tiana and Emily of AMEC. Given the proximity of the borings to each other, soil lithology was similar. Neither boring exhibited any indications of hydrocarbon impact; PID readings were <5 ppm at all depths in both borings. According to Emily, the nested well needed to be completed, with both rigs offsite, by Tuesday morning.

Well LSZ55 will be constructed in a separate borehole adjacent to well CZ24/UWBZ38, with drilling expected to begin following the Thanksgiving holiday.

Please contact me if you have comments or questions regarding this memo.

Thank you,
